Art Unit: 1711

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Porter in view of Radovich.

3. Porter discloses flexible polyurethane foams (see examples) made from isocyanate, polyol, blowing agent, additives, amine catalyst (col. 3, lines 17-20), and an anhydride (col. 3, line 35). In example 3, he discloses using 2.9 parts water per 100 parts polyol. He differs from the claims by not disclosing the mattress, upholstery or carpet backing applications. He differs from the claims by using acids or anhydrides and metal as well as amine catalysts.

4. Radovich discloses that foams made with 1.7-3 or 2.2-3.2 parts water per 100 parts polyol make foams having the density of the claims (see tables-col. 12). He teaches that these foams are used for mattresses, carpeting and upholstery (col. 10, lines 43-44).

5. It would have been obvious to one of ordinary skill in the art at the time the invention was made to choose the combination of anhydride with amine catalyst because it's been held obvious to choose one from a limited number of choices. It would have been obvious to use Porter's foams for the same applications of Radovich because they are made from similar ingredients, have the same density, and Porter teaches the fine cell structure of his product.
